DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shattil US 20030147655A1 in view of Razavilar US 20030181211A1.

As to claims 1-2 and 4-5, Shattil discloses a method of setting operation channel of wireless local area network access point (see par. 0076,0090), comprising the steps of: obtaining the occupation status of various channels in the surrounding; dividing each channel into a plurality of sub-channels and computing to determine in-use weight of each sub-channel according to the occupation status of the channels (see par.

Art Unit: 2617

0166,0168); Shattil does not specifically disclose selecting the channel with the most unoccupied sub-channels to serve as an operation channel of the wireless local area network access point. In an analogous art, Razavilar discloses a method of setting operation channel of wireless local area network access point (see par. 0031), selecting the channel with the most unoccupied sub-channels to serve as an operation channel of the wireless local area network access point (see fig. 4). Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to combine these teachings for selecting best available channel and reducing inference.

As to claim 3 and 6, Shattil discloses the method of claim wherein the number of sub-channels in each channel is set according to a demand (bandwidth: see par. 0168).
